

Honest answer: **we're not actually pricing lower than them. We just look lower because we're transparent and they hide their markup in wholesale.** Let me show the math.

The trick — different platforms structure fees differently

Platform	Visible fee	Hidden fee	True economic take
Printify	"\$X wholesale, set your retail"	30-40% markup baked into wholesale	~9-11% of retail
Printful	"Print on demand pricing"	30-40% markup baked in	~10-12% of retail
Supliful	\$49-99/mo subscription	Wholesale markup hidden	~12-15% of retail
Keychain	Per-order + service fees	Bundled service charges	~10-15% of retail
Pietra	\$59-149/mo + 3-5% per order	Sourcing markup hidden	~6-10% of retail
iLaunchify Builder	10% creator-side, fully visible	None — fully transparent	~14.6% of retail

Apples-to-apples on a \$30 retail product

Same product, same partner cost (\$8 wholesale), same shipping (\$4.50). What does each platform ACTUALLY take?

Printify:

- Wholesale charged to creator: \$8 + 35% markup = **\$10.80**
- Printify keeps: \$2.80
- As % of retail: **9.3%**

Supliful:

- Subscription amortized at 50 orders/mo: $\$49/50 = \0.98
- Wholesale markup (estimated ~\$2.50/order): \$2.50
- Total per order: \$3.48
- As % of retail: **11.6%**

iLaunchify Maker:

- Creator-side fee: $15\% \times \$30 = \4.50
- Partner-side fee: $5\% \times \$8 \text{ wholesale} = \0.40
- Total per order: \$4.90
- As % of retail: **16.3%**

iLaunchify Builder:

- Creator-side fee: $10\% \times \$30 = \3.00
- Partner-side fee: $5\% \times \$8 \text{ wholesale} = \0.40
- Subscription amortized at 80 orders/mo: $\$49/80 = \0.61
- Total per order: \$4.01
- As % of retail: **13.4%**

iLaunchify Agency:

- Creator-side fee: $7\% \times \$30 = \2.10
- Partner-side fee: $5\% \times \$8 = \0.40
- Subscription amortized at 400 orders/mo: $\$199/400 = \0.50
- Total per order: \$3.00
- As % of retail: **10.0%**

So actually...

We're charging MORE than Printify at Maker tier (16.3% vs 9.3%). We're charging similar at Builder (13.4% vs ~11%). We're charging similar at Agency (10.0% vs ~11%).

The reason it FEELS like we're charging less: the headline number creators see (10% Builder) is the creator-side-only fee. They don't see the partner-side fee unless they look closely. Printify creators don't see ANY fee — it's all baked into the wholesale price they're shown.

Why this is actually fine — three real advantages

We're not actually competing on price. Three things justify charging at-or-above market rates:

1. Compliance-grade infrastructure. None of those platforms do FDA-grade Nutrition Facts panels, Supplement Facts, Drug Facts, AAFCO panels, or the velocity-tier compliance scan. Printify is for t-shirts and mugs. Supliful is for a fixed catalog of supplements. Neither can let a creator launch a NEW recipe with proper compliance. Our compliance infrastructure costs us money (we eat Anthropic + Shutterstock + cert verification + multi-partner workflow). That cost has to be in the fee.

2. Multi-partner orchestration. Printify uses ONE partner per order. We can split a single order across manufacturer + label printer + co-packer + warehouse. That's the orchestration thesis. Creators don't see this complexity, but they benefit from better partner-matching, faster

turnarounds, and the ability to do bulk + on-demand on the same SKU. That's worth a margin premium.

3. Custom formulation. Printify is paint-the-can dropshipping. Supliful is paint-the-can dropshipping. iLaunchify lets a creator design a NEW recipe (Recipe Builder Mode 2/3) with proper compliance scan. That's a completely different product. It justifies a different price point.

What we SHOULD do — three strategic moves

Move 1: Stop calling it "lower fees" in marketing. The /pricing page should highlight COMPLIANCE + ORCHESTRATION + custom formulation, not "lower than Printify." If a creator is price-shopping us against Printify, they're a bad-fit creator. They want a Printify-style commodity service; that's not our product.

Move 2: Reframe partner-side fee as "transparent partner economics." Our partner-side 5% fee is a feature, not a cost. We can market it as: "Partners earn published wholesale + iLaunchify takes 5%; you see every dollar." Printify's hidden 35% markup means creators don't know if they're getting screwed. Use transparency as the wedge.

Move 3: Don't lower prices to compete. Our economic take is already similar to or higher than Printify's. The simulation already shows we can be profitable at this rate. Lowering further would compress margin without buying us anything — Printify creators won't switch on price alone.

When raising prices makes sense

Three scenarios where I'd consider:

At first sign of demonstrated value: After 100 beta cohort creators have shipped real orders with our compliance infrastructure, you have real proof points. Then raise Builder \$49 → \$79 (already in Rec 3) — creators paying \$79 won't churn because they're hooked on compliance + orchestration value.

At Agency tier: Agency creators are sophisticated and price-insensitive within reason. \$199 → \$249 or even \$299 is defensible because they're paying for multi-brand + dedicated support + custom contracts.

Never at Maker tier: Maker is the funnel. Maker creators are evaluating; they'll churn at the first sign of friction. Keep Maker at \$0 + 15%. The path to revenue is converting them up, not extracting more from them.

The bottom line

We're not under-pricing. We're transparent-pricing. Printify, Supliful, and the others structure their fees to feel cheap (hidden markup) while actually taking 10-15% of retail. We take 10-16% but show every dollar.

The strategic answer to your question: **our fee is not the wedge. Compliance + orchestration + custom formulation is the wedge.** Stop benchmarking pricing against Printify; benchmark capability against Printify. That's a fight we win.

The /pricing page and /business landing copy should reflect this. Current copy probably overemphasizes "lower fees" because that's what felt true at face value. Refactor to lead with what we uniquely deliver. Want me to draft that copy rewrite?
